

# Message from the President:

Hello Members,

A few months ago, some of our members came up with the 'Ramble' idea, i.e., visit members' homes to see what they are growing and how they do it. So far, we have been to two places, Joyce and John Schofield's and Patti and Charlie Scholes's. In both cases, it has been a great experience. Those of you who went there know just how much these hosts did to welcome us to their homes. Hopefully, we will have other members who want us to visit!!

Summer is hanging on and we're all trying to keep the orchids growing in spite of the heat. Remember to ensure they have adequate air movement and plenty of water, and they should survive.

Next month, we will be having our annual picnic. Hope you have marked your calendar for September 25th. There's always lots of great food, wonderful bingo prizes, door prizes, etc. Our chairman, Denise Baumann, is working hard to make **September 25th** it as successful as last year's. Thanks, Denise, for being our chairman again. Don't miss this outing!

Our meeting this month will again be at Kiwanis Island. Attendance recently has not been too great. We look forward

Bc. Mount Hood

#### **UPCOMING EVENTS:**

August 10th 6:15 pm **Board Meeting Kiwanis Park** 

August 10th 7:00 pm **Business Meeting Kiwanis Park** 

August 24th 6:30 pm **Back to Basics Meeting Cocoa Beach Library** 

**Annual Picnic** 

to seeing that improve. For those of you who have served and been involved in shows, you appreciate how important it is to have members who are motivated to help make our orchid society one of the best. It goes without saying, the more members we have willing to help and be involved, the greater the success and the easier it is on everyone.

Our program at the August 10th meeting will be a demonstration on dividing a cymbidium orchid. If time permits, perhaps we can also show the way to divide a cattleya or dendrobium.

See you at the meeting,

Jim

Our annual picnic will be on September 25th at the Cocoa Beach Pavilion. This is a great opportunity to get to know everyone in the society and have lots of fun. We'll have games and beautiful orchids for prizes.

Denise Baumann, Picnic Chairman, will have the sign-up sheet at the next several meetings. The society will provide the main dish, drinks, etc., and society members will bring their favorite dishes to share.

DIRECTIONS: From Merritt Square Mall, take SR520 east. Turn right (south) onto A1A. Turn right onto Minuteman Causeway. Just past Merritt Island High School, bear to the right and then take a left into Cocoa Beach Country Club. Turn left into the parking lot and go past the tennis courts to the pavilion.

#### C. Mary Schroeder

## 2011 PCOS OFFICERS AND CHAIRS

PRESIDENT Jim Adamson 321-632-2847 iadamson1@cfl.rr.com

# **RAMBLE**

Members had an enjoyable time at the recent ramble. Charlie shared his method of potting, his orchid house (at right), and his rigorous fertilizing schedule. He also shared several of his recent divisions with members who attended. For anyone who didn't get a good look at the picture of their orchid, they are all shown in this edition of the Rhyzome.

If you would like to continue with the rambles in the future, let the board know.

Pot. Red Crab 'Uncle Wang'

# SUNSTINE

Deepest sympathy to John Hicks and family upon the passing of his sister.

Our thoughts go out to member Ruth Larson as she continues her treatment.

# **Upcoming Shows**

South Florida Orchid Society Show Oct. 1-2, 2011 "Falling for Orchids" and Speakers Day Event (Find details on their website)

Brevard County Orchid Society Show Oct. 28-29, 2011 (Find details on their website)

### AUGUST IN YOUR ORCHID COLLECTION

July and August are the two most similar months in South Florida. Most of the advice on watering, disease and pest control in last month's calendar still apply but subtle changes are taking place. Although it may not seem so, as temperatures climb into the low nineties most afternoons, summer is in retreat: each day a little shorter, each night a little longer. With shorter days the importance of watering as early in the morning as possible comes to the fore. With less hours of sunlight to dry the plants, extra care should be taken in choosing when to water. Back to the basics of the classic saying: If a *Vanda* looks like it needs water, water it; If a *Cattleya* or *Oncidium* looks like it needs water, water it tomorrow. If a Paph or a Phal looks like it needs water, you should have watered it yesterday. If plants retain water even from an early morning watering, allowing them to dry a bit harder before the next watering is always a good idea. An extra day of drying rarely does harm.

August should provide numerous opportunities to dry each orchid to its desired level of dryness. Take the opportunity to dry your orchids "hard" at least once but preferably twice in August. This will give your orchids a leg up on their mortal enemies, the fungus, before the drizzle of September switches the advantage to our adversaries. August is definitely not the month to over indulge in water. September, the soggiest of months, is next up. The corollary to this calculated drying is the concept that when watering in August above all water thoroughly. If watering is necessary be sure that the roots and medium are totally saturated with the application. The drizzling rains of September are so detrimental precisely because they keep the foliage of the plants wet unduly long. We want our plants which are still growing to receive plenty of water but also plenty of drying time.

Good air circulation and proper watering are the keys to disease prevention. Remember that your plants will have increased considerably in size by this point in the growing season. They have added extra growths and extra leaves across the summer. August is a good time to evaluate the spacing of our plants. Remember the old Florida saw that one needs a cat to grow good orchids because when properly spaced a cat should be able to navigate the benches between plants without knocking them over. While we can not recommend specific chemicals, the county agent recommends Banrot, a convenient combination of Thiophanate-methyl and Truban which controls a number of leaf-spotting diseases and soft rots, for home owner use. A combination of Thiophanate-methyl and mancozeb has also been recommended. This can be found pre-packaged as Duosan. If one can overcome the aversion to chemicals and can learn the safe application of them, they are valuable tools to better orchid growing. An ounce of prevention is worth a pound of cure especially before the soft, slow drizzle of September sets in.

Lengthening nights in August mean cooler nighttime temperatures. Many sympodial orchids are reaching the end of their growing cycle and require less nitrogen. Cattleyas and oncidiums have maturing bulbs. Genera that become deciduous in winter like nobile dendrobiums, calanthes and catasetums should be given much less nitrogen in August to prevent them producing an unwanted off season growth and perhaps forgetting to flower. Substitute an additional application of potassium nitrate and Epsom salt (1TBS each per gal) instead of the balanced 20-20-20. Vandas will respond well to this also, as several of the parental species of our hybrids produce blooms on shortening day lengths and lower levels of nitrogen in their fertilizer seems to egg them on. As explicated in the last chapter, modern research indicates that orchids require less phosphorous than previously thought. This concept should lead us to more judicious use of phosphorus. Fertilizer high in phosphorus may still be of some value at the end of the growing season, perhaps not so much as stimulus as shock. One or two heavy applications in succession, a week or so apart will certainly provide all the phosphorus and all the stimulus (or wake up shock), our plants require to bloom.

Snails can be somewhat of a problem in August too, but left to multiply they will be in their full glory when those slow unrelenting rains of September set in. Control them with baits in pellet or liquid/paste form. Remember, these are baits; the pests are drawn to them. Therefore apply lightly, but frequently. Because they wash away in the heavy rains, baits should be reapplied every two weeks. One pellet every two to three feet will do the job, but one application will not. Given a choice, the smallest pellets baits are best. They keep us from over applying and also pose much less threat to neighborhood pets. A small bait pellet in a *Vanda* crown is a nuisance, a large bait pellet can be a disaster.

If you have been waiting to make cuttings of the terete vandas or reed stem epidendrums, you can wait no longer. The potting season is drawing absolutely to a close. Pot up those overgrown Phals, before they even think of spiking. Re-set those strap leaf vandas early in August whilst they still have just enough time to re-establish themselves in the September humidity and before the cool weather arrives and their root growth slows or stops. As in all seasons, be sure that the plants are firmly set in their containers. There is no "wiggle room" this late in the growing season to restart tender roots that have been chafed off a loosely set plant. As the cooler weather approaches try to give plants that have been repotted late more protection from the first cold snaps.
