

Platinum Coast Orchid Society

The Rhizome

October 2017 Edition

Presidents Corner

Lc. Schilleriana 'Paradise Blue'

We hope that everyone made it through the storm and things are getting back to normal.

Hopefully your orchid collections are recovering as well. Fall is just around the corner and we will all enjoy some cooler temperatures.

Our October meeting will be on the 11th, and our speaker will be Arthur Katz.

For anyone with an interest in Facebook - The Platinum Coast Orchid Society group has been created and is currently "under construction". If you are a Facebook user, please have a look.

I look forward to seeing everyone at the next meeting.

Jodi

Sunshine

Some of our members were hit pretty hard by Irma. While most of us only had plant debris in our yards and some inconveniences due to power outages, others have had to move from their homes due to flooding. Keep them in your thoughts and prayers.

CALENDAR

Wed., Oct. 11th 6pm Board Meeting

Wed., Oct. 11th 7pm Business Meeting

Program: Arthur Katz will speak on

"Rare and Unusual Orchids"

Monthly Checklist for September and October

Cattleya—Despite the shortening days and lowering angle of the sun, September can still be one of the hottest months. Water and fertilizer need to be in balance with heat and light. The alert grower will notice, however, that his or her plants are beginning to slow down a bit. Growths are maturing, and the sheaths are giving the promise of the next six-months' bloom.

Check plants for potting needs for the last time this season. Any in dire need should be potted, even some that may be on the cusp, as there is just enough of the growing season left to allow the plants to establish before the days start to get really short and cold.

This is the month for purples derived from *Cattleya labiata* breeding to flower. If you are short on flowers, look into this group. There is nothing that can quite match this type for beauty and fragrance. They are easy to grow, too.

Plants summered outdoors should begin to be prepared to be brought back into the winter growing area. Clean the plants up and be on the lookout for any pests they may have picked up during the summer. Treat as necessary. (Visit www.aos.org for more info like this.)

**GREAT PLACES FOR
MEMBERS TO FIND
INFORMATION ON
ORCHIDS:**

1. Programs—Take notes—someday they will make sense.
2. AOS Magazine articles. “Orchids” is available at every meeting for check out.
3. Members— Ask longtime members about orchids, but realize that your yard and potting choices are key. We all use trial and error to succeed.
4. Internet sites—**www.aos.org**—This AOS site has the answer to almost any question.
5. Rambles at members’ homes to help you identify the best way to grow your orchids.
6. Visit the PCOS website and reread some of the articles in the newsletters from the past year or two.

PCOS is an affiliate of the **American Orchid Society (AOS)**. There’s an abundance of information on the AOS website. Please visit www.aos.org for articles, advice on growing orchids, and lots of free information.

Ask Betty Adamson for an application if you’re interested in joining.

For all current members, remember that your renewal notice will arrive in the Orchid Magazine prior to your month of renewal.

Monthly Checklist for November and December

Cattleya

Growers of just about every level of expertise will have begun to notice autumn conditions by now. Days are becoming shorter, hence cooler; the sunlight has less intensity as a result of the sun's lowering angle, nights are longer and generally cooler. Plants are responding by slowing and ripening their growth in preparation for winter.

The first cultural change noticed should be a reduced frequency of watering, as the plants dry out more slowly. This is a function of both the reduced day length and lower temperatures, as well as the plants' slowing growth rate. Reduced water needs signal a reduced need for fertilization. Note that the key word is reduced, not eliminated. Feed less frequently and at lower dosage, but feed. Growths, made during summer's heat, and relatively soft and green, will be ripening -- hardening -- in preparation for a brief period of rest (in many cases).

Many of these ripening growths will have a sheath, presaging the coming winter or spring flowering season. In some cases, these sheaths will have been evident since as early as July. (Early sheath development does not mean early flowering on plants with winter-spring seasons.) You may notice that some of these sheaths are showing signs of yellowing. This is not abnormal. Autumn's more pronounced temperature fluctuation can lead to water condensation inside the sheath, hastening the normal process of senescence, so yellowing sheaths can be left on the plant only so long before they must be carefully removed to preserve the bud primordia within. Water condensation left unchecked can rot the bud primordia. The sheaths can be safely removed by slitting open and peeling down toward the pseudobulb.
